

AGRI-KIND

PREMIUM CANNABIS PRODUCTS

RSO is a thick, sticky substance.

In order to effectively medicate and dose the product, Agri-Kind recommends lightly warming up the syringe.

We have found that patients often prefer to hold the device in their hands for a few minutes, effectively using body heat to warm the applicator up.

Alternatively, you can hold the applicator under low heat, running water, keeping the plunger dry.

Another option is to submerge the capped applicator in water (with the plunger above water).
